

CLARK

Chair with Local Asymmetric Registration Keys

A five-dimensional aperiodic monotile

CLARK tiles five-dimensional space, but no tiling by its copies has a nonzero translational period.

Chair shapes in dimensions 2–5

3 squares · 7 cubes · 15 tesseractes · 31 five-cubes

The boundary has 128 pyramidal bumps and 128 matching sockets, each $\frac{1}{240}$ unit deep. These enforce the tiling rules geometrically.

Lean proof checked locally. Independent verification pending.

2D projection of the 5D carrier; boundary keys omitted.
